

Preventive Maintenance for Roadway Surfaces

April 25-26, 2018

Eagle Crest Resort | Redmond, Oregon

9 big reasons to attend

1. Introduction to Pavement Preservation

Learn about pavement preservation and why it's important. Discussion on pavement distress identification and an overview of treatment types. Learn about new road condition reporting standards that will soon be required as part of HB 2017.

2. Preventive Maintenance Techniques

This session will focus on applications intended to extend pavement life. Various applications including treatment preparation work, stand alone surface repairs, and slurry seals will be explored.

3. Pothole Patching

Learn the causes of potholes and proper repair procedures including effective methods and equipment used. Session will also include a panel discussion on methods and pothole programs.

4. Crack Sealing

Crack sealing is an inexpensive first line of defense in pavement preservation. Learn the basics of material selection, crack seal application, techniques for good repairs, and how to troubleshoot problems.

5. ADA/Public ROW Accessibility Guidelines

Learn how the U.S. Access Board's ROW Accessibility Guidelines can impact your roadway maintenance decisions in relation to ADA requirements. The session will also review and discuss what FHWA defines as an "alteration" to a roadway, and when it triggers the need for ADA improvements.

6. Chip Sealing For Success

In this two part series, you will learn about preventive maintenance techniques, surface ratings, and types of treatments. The second part of the series discusses developing a successful chip sealing program, including information on construction procedures, uses of fog seal, cold weather chip seal practices and treating fat rut areas.

7. Paving Best Practices

Learn about pavement construction practices that will lead to a successful project. Topics will include mix design considerations, workmanship, prep work, milling, tack coats, pavement mat lay down, and compaction.

8. Slurry, Microsurfacing Treatment

Update Learn about various surface seal treatments, how to select candidates, and keys for project success. Discussion on industry updates and newest techniques.

9. Thin Lift Overlays: An Update

Hear about the latest research and industry developments in thin lift overlays. This presentation will cover the benefits and best practices of this process, and share some examples.

Who should attend?

Maintenance crew members, first-line supervisors, engineering technicians, construction inspectors, and those responsible for the preventive maintenance and repair of roads and streets.

Gain up-to-date training that improves your ability to provide or specify quality maintenance of roads and streets. Current industry standards and information are provided on a variety of surface treatment types and procedures.
