

Evan Altorfer

Oregon State University

Ron Polvi Scholarship

I am currently a senior at Oregon State University majoring in civil engineering. I chose to pursue a career in civil engineering because I enjoy problem solving, and want to use my skills to help my community through the design and implementation of safe and sustainable infrastructure.

In my free time I love playing sports and spending time outdoors, hiking, rafting and backpacking. At OSU I play as many intramural sports as I can and I plan to play in about six leagues this coming school year. I have also become very involved in the Adventist Christian Fellowship club, Young Life and the OSU Beaver Dam. I attend as many home sporting events as possible, so if you turn on a Beaver game you are likely to see me going crazy for the Beavs in the front row of the student section.

I have spent the past summer interning for Oregon Iron Works where I have assisted the project managers with several bridge projects that are being constructed across the country. This has made me excited for my future career in engineering.
