

Greg Collins, E.I.T.
Oregon Institute of Technology
Civil Engineering Scholarship

I graduated from Tigard high school in 2013 and started my college career in 2013 with the goal of designing bridges in Oregon. This goal led me down the path of getting a Masters degree, and in June of 2019 I will graduate with a BS and MS in Civil Engineering.

During the last two summers I had the opportunity to work with Kiewit Engineering group designing the temporary structures for super projects across the US. These internships opened my eyes to construction engineering services and the importance of working with the job to get the best product out. After graduation I will be going back to Kiewit Engineering to continue supporting both small and large construction, and making sure they get the highest quality design for their temporary structures.

Thank you. I'm honored to have received this scholarship.
