

Alex Furnish
Oregon State University
Civil Engineering
Polvi Scholarship

I am very excited to be honored with the Ron Polvi Civil Engineering/Sustainability Scholarship. Thank you so much.

I am currently interning with the Bureau of Environmental Services with the City of Portland, and plan on working in public works once I graduate. I helped design and build a rainwater catchment system in a Nicaraguan community this summer and hope to continue working with international communities in need as well. I am especially interested in sustainable clean drinking water solutions.

In the past, I have interned with the City of Eugene, National Oceanic and Atmospheric Administration (NOAA) and the Natural Resources Conservation Service (NRCS). I love working directly with the public to help maintain and improve communities.
