

Kimberly Harnish

Oregon State University Civil Engineering Scholarship

Kimberly is entering her senior year at Oregon State University. When she graduates, she will finish with a degree in civil engineering and a minor in Spanish.

Over the course of her college years she has been a highly active member in the OSU Concrete Canoe Team and has loved every minute of it! She also had the opportunity to study abroad in Argentina, where she later returned to visit the friends she had made there.

During all four years of college she has lived in the House of Charis, which is a house of about 50 Christian women. While living there she served as the house social coordinator and this coming year she will be one of the house managers. In her spare time she enjoys hanging out with friends, playing sports and volunteering at her church or at an after school program for elementary school children.

Kimberly decided to pursue civil engineering and Spanish when she was working to build houses on mission trips to Mexico. Once she receives her degree, she plans on working hard to help people and even dreams of going to a developing Spanish-speaking country to work for a while. One of her favorite sayings is, "Dream big, act small, change the world" -- And with a degree in civil engineering, she hopes to do just that!
