

Kristina Currans

Kristina Currans is a senior in Civil Engineering at Oregon State University and a recipient of a \$500 Polvi Sustainability Scholarship for the 2009-2010 school year.

Currans was born and raised in the Corvallis area.

“Because of this, I have an amplified love of the walking, people and being involved in the community,” she says.

“My decision to study civil engineering came from my love of architecture and math, but like most civil engineering students, the initial decision to become a structural engineer faded after taking class after class of structural analysis and design.”

“As my interest in structures faded, my passion for public and non-motorized transportation blossomed. I am a few classes shy of my undergraduate degree in civil engineering and look forward to pursuing dual masters in transportation engineering and urban and regional

planning at Portland State University. My ultimate career objective is to become involved in integrating new and improving existing pedestrian and bicycling facilities and infrastructure in urban city environments.”
