

Lori Vollmer

Oregon State University

Polvi Sustainability Scholarship

My name is Lori Vollmer and I am from Astoria, Oregon. I graduated from Astoria High School in 2007, earned an associate degree from Clatsop Community College in 2009 and transferred to Oregon State University in the fall of 2009.

I decided to become an engineer while taking classes up at Clatsop Community College. There, I took as many science and engineering related courses as I could and became fond of the AutoCAD program. I was extremely excited to know of my acceptance to Oregon State as they have an exceptional engineering program. My first year at Oregon State was very exciting and challenging. I finished up my prerequisites for Pro-School, participated in the design process for the steel bridge competition and became a member of the ASCE Student Chapter.

I am currently pursuing a bachelor's degree in civil engineering in the Oregon State Professional Engineering Program. This year, I will begin taking more technical courses in my field of interest and will hopefully find a

discipline within civil engineering that I want to focus on.

When school isn't in session, I work at Lewis and Clark National Historical Park in the Facility Management and Grounds division. There, I help maintain the trails in the park as well as construct new trails and maintain the park landscape. When I'm not working, I enjoy beachcombing, hiking, canoeing and watching movies with my family and fiancé. I would sincerely like to thank everyone who made this scholarship possible for me to receive.

Your time and generosity is greatly appreciated!
